

Cybersecurity Incident Report:

Network Traffic Analysis

Part 1: Provide a summary of the problem found in the DNS and ICMP traffic log.

The UDP protocol reveals that: [port 53 is unreachable when attempting to access the yummyrecipesforme.com website.](#)

This is based on the results of the network analysis, which show that the ICMP echo reply returned the error message: [UDP port 53 unreachable.](#)

The port noted in the error message is used for: [DNS Services.](#)

The most likely issue is: [a DNS server is down, or a malicious attack like a DoS or DDoS is occurring.](#)

Part 2: Explain your analysis of the data and provide at least one cause of the incident.

Time incident occurred: [1:24 pm, 32.192571 seconds](#)

Explain how the IT team became aware of the incident: [Several customers of clients reported that they were not able to access the client company website www.yummyrecipesforme.com, and saw the error “destination port unreachable” after waiting for the page to load.](#)

Explain the actions taken by the IT department to investigate the incident: [Attempted to visit the website and also received the error “destination port unreachable.” To troubleshoot the issue, they loaded their network analyzer tool, tcpdump, and attempted to load the webpage again. To load the webpage, their browser sent a query to a DNS server via the UDP protocol to retrieve the IP address for the website's domain name.](#)
Note key findings of the IT department's investigation (i.e., details related to the port affected, DNS server, etc.): [The analyzer shows that when we sent UDP packets to the DNS server, we received ICMP packets containing the error message: “udp port 53 unreachable.”](#)

Note a likely cause of the incident: [DDoS or DNS server shutdown](#)
